

APM

Project Portfolio

At the APM workshop, materials meet designers and fabricators. We select the finest quality material for interior, exterior, or furniture manufacturing projects. Each project is unique, and we select materials based on project specifications and technical requirements. At APM, we offer a complete turnkey solution to our client from materials selection to design, fabrication, and necessary certification. No matter what your project is, rest assured that we have the materials and expertise to complete it successfully.

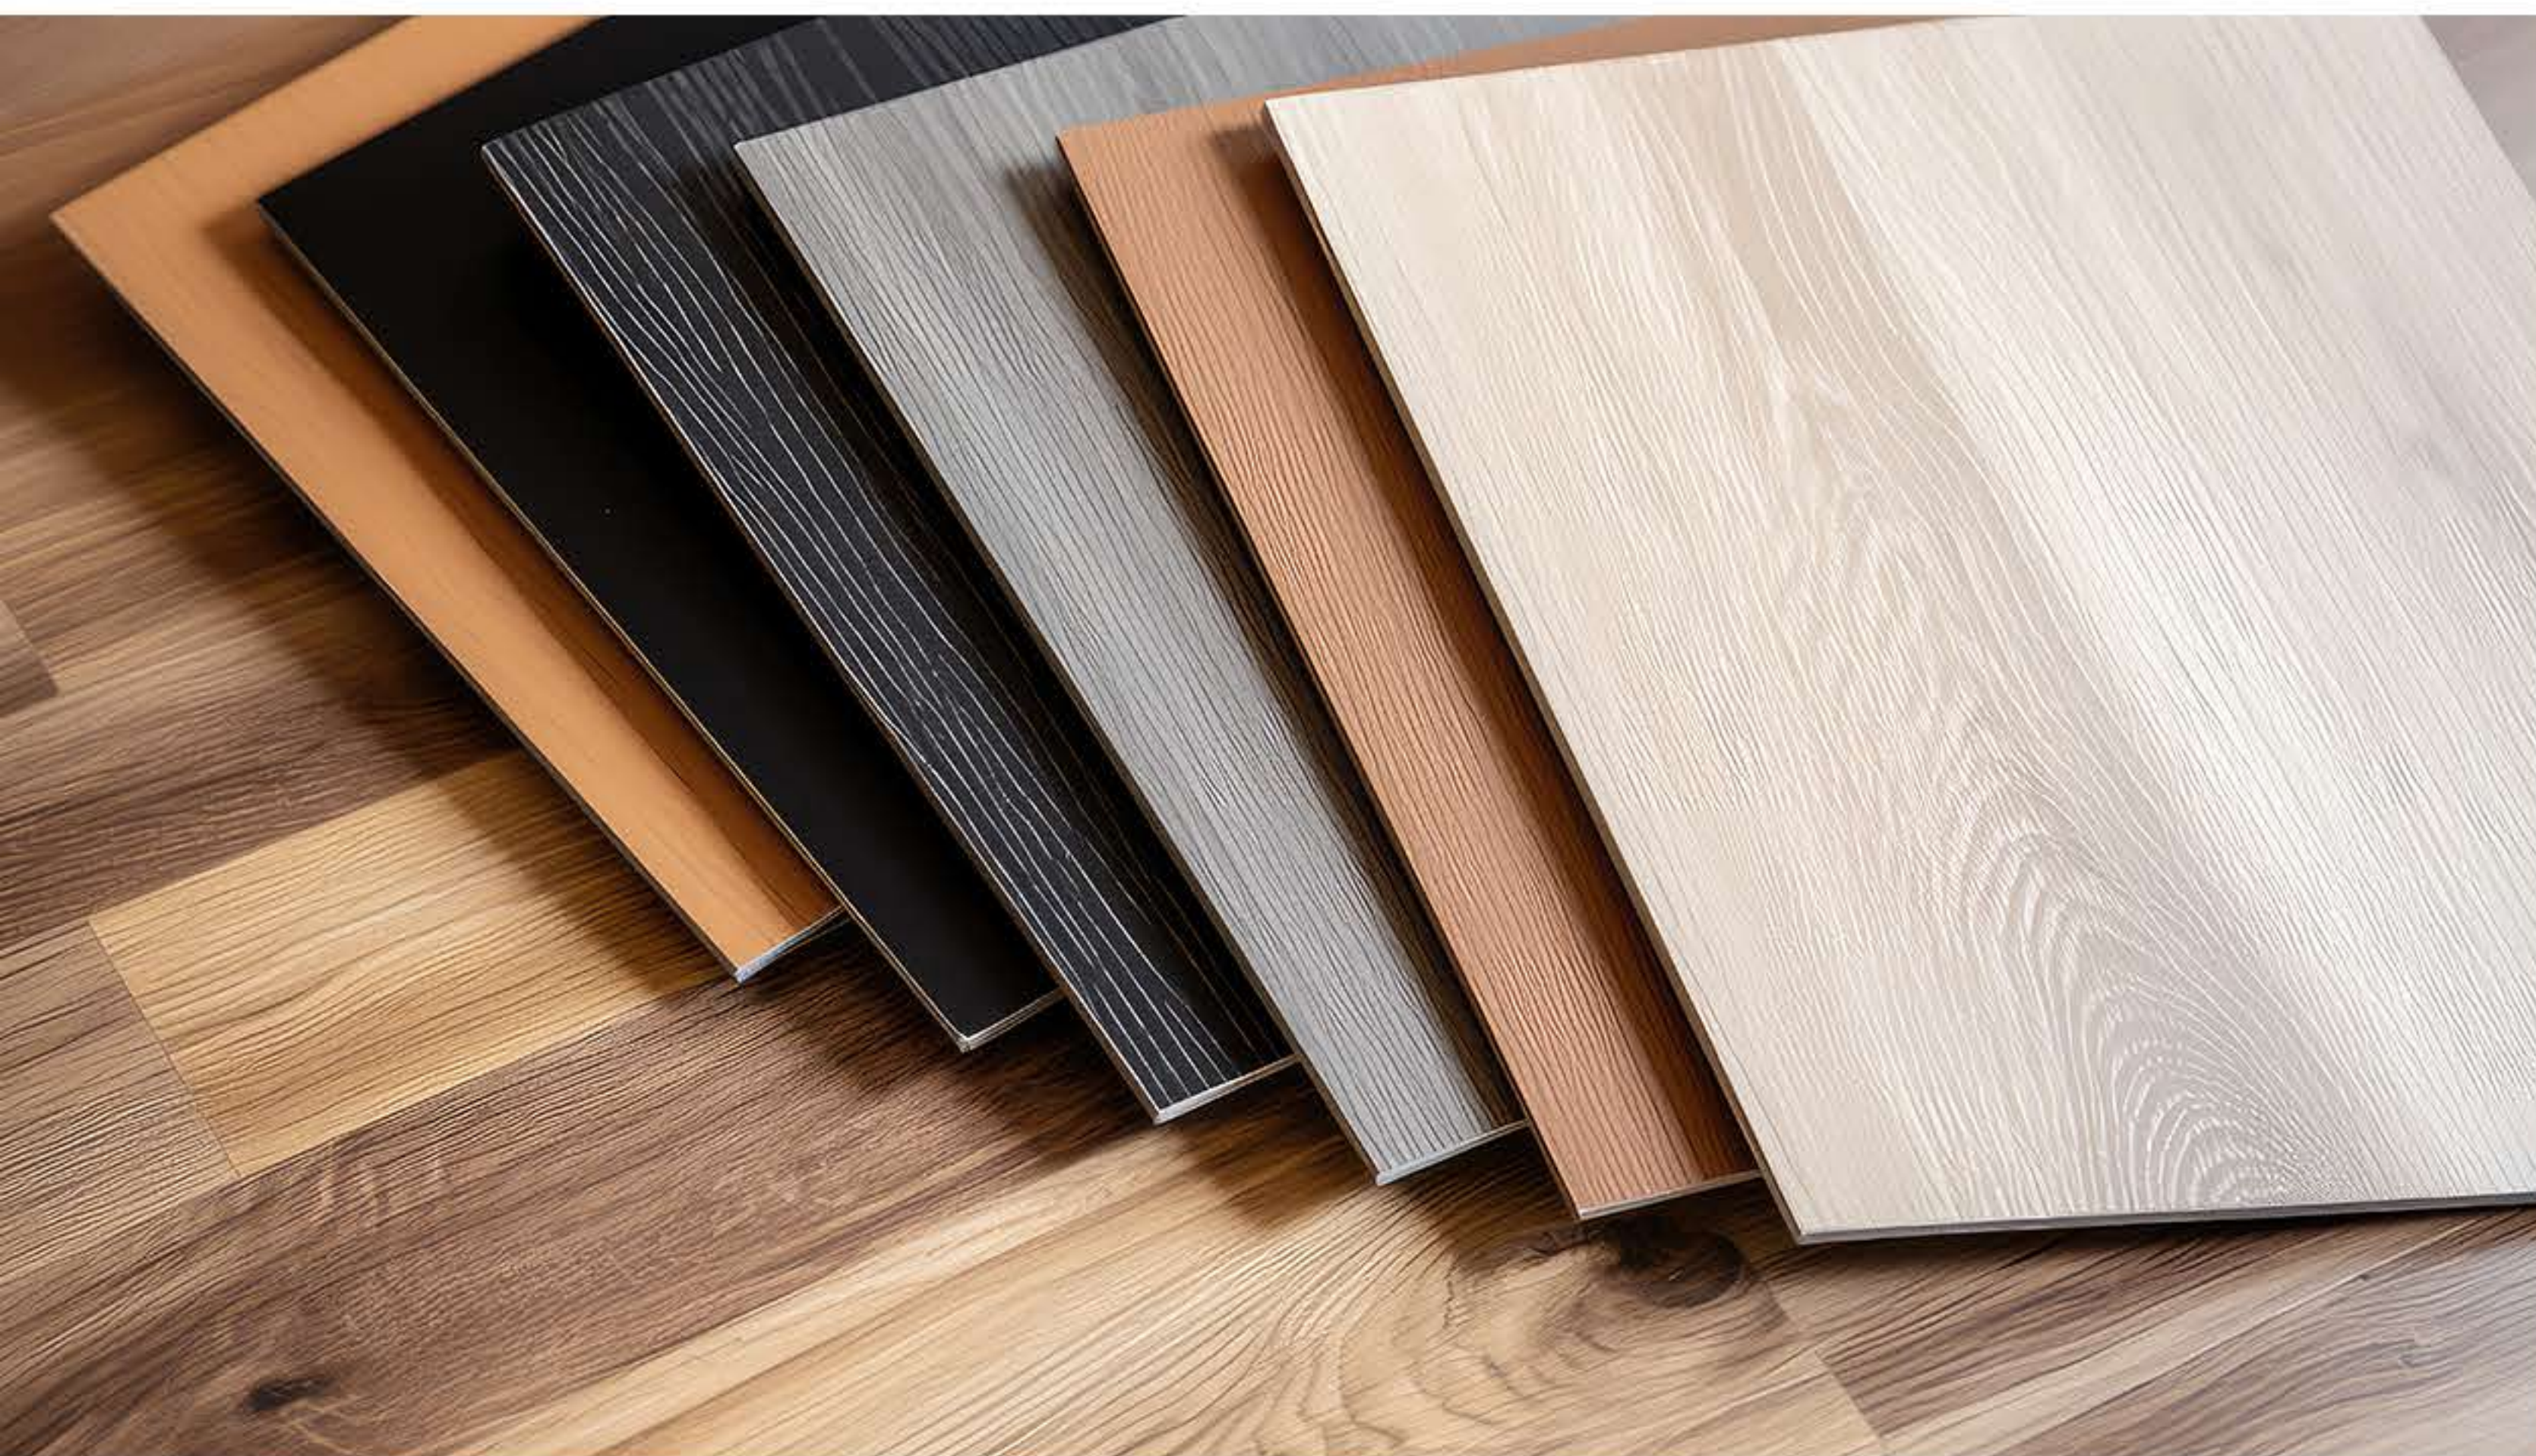

Our materials and solutions are sustainable, lightweight, fire retardant, and 100% recyclable. Using superior materials for your project and delivering quality turnkey solutions is our ultimate promise for any interior and exterior project. Most of the core materials we use are manufactured in-house, and we source necessary supporting materials domestically and from Europe, depending on project location. Because of that, we can meet the highest quality and safety standards for any project.

Our Portfolio Projects:

Design, fabrication and manufacturing light-weight thermal insulation panels, structural parts, components, and profiling for interior and exterior projects. In our workshop, we do complete custom fabrication and product development.

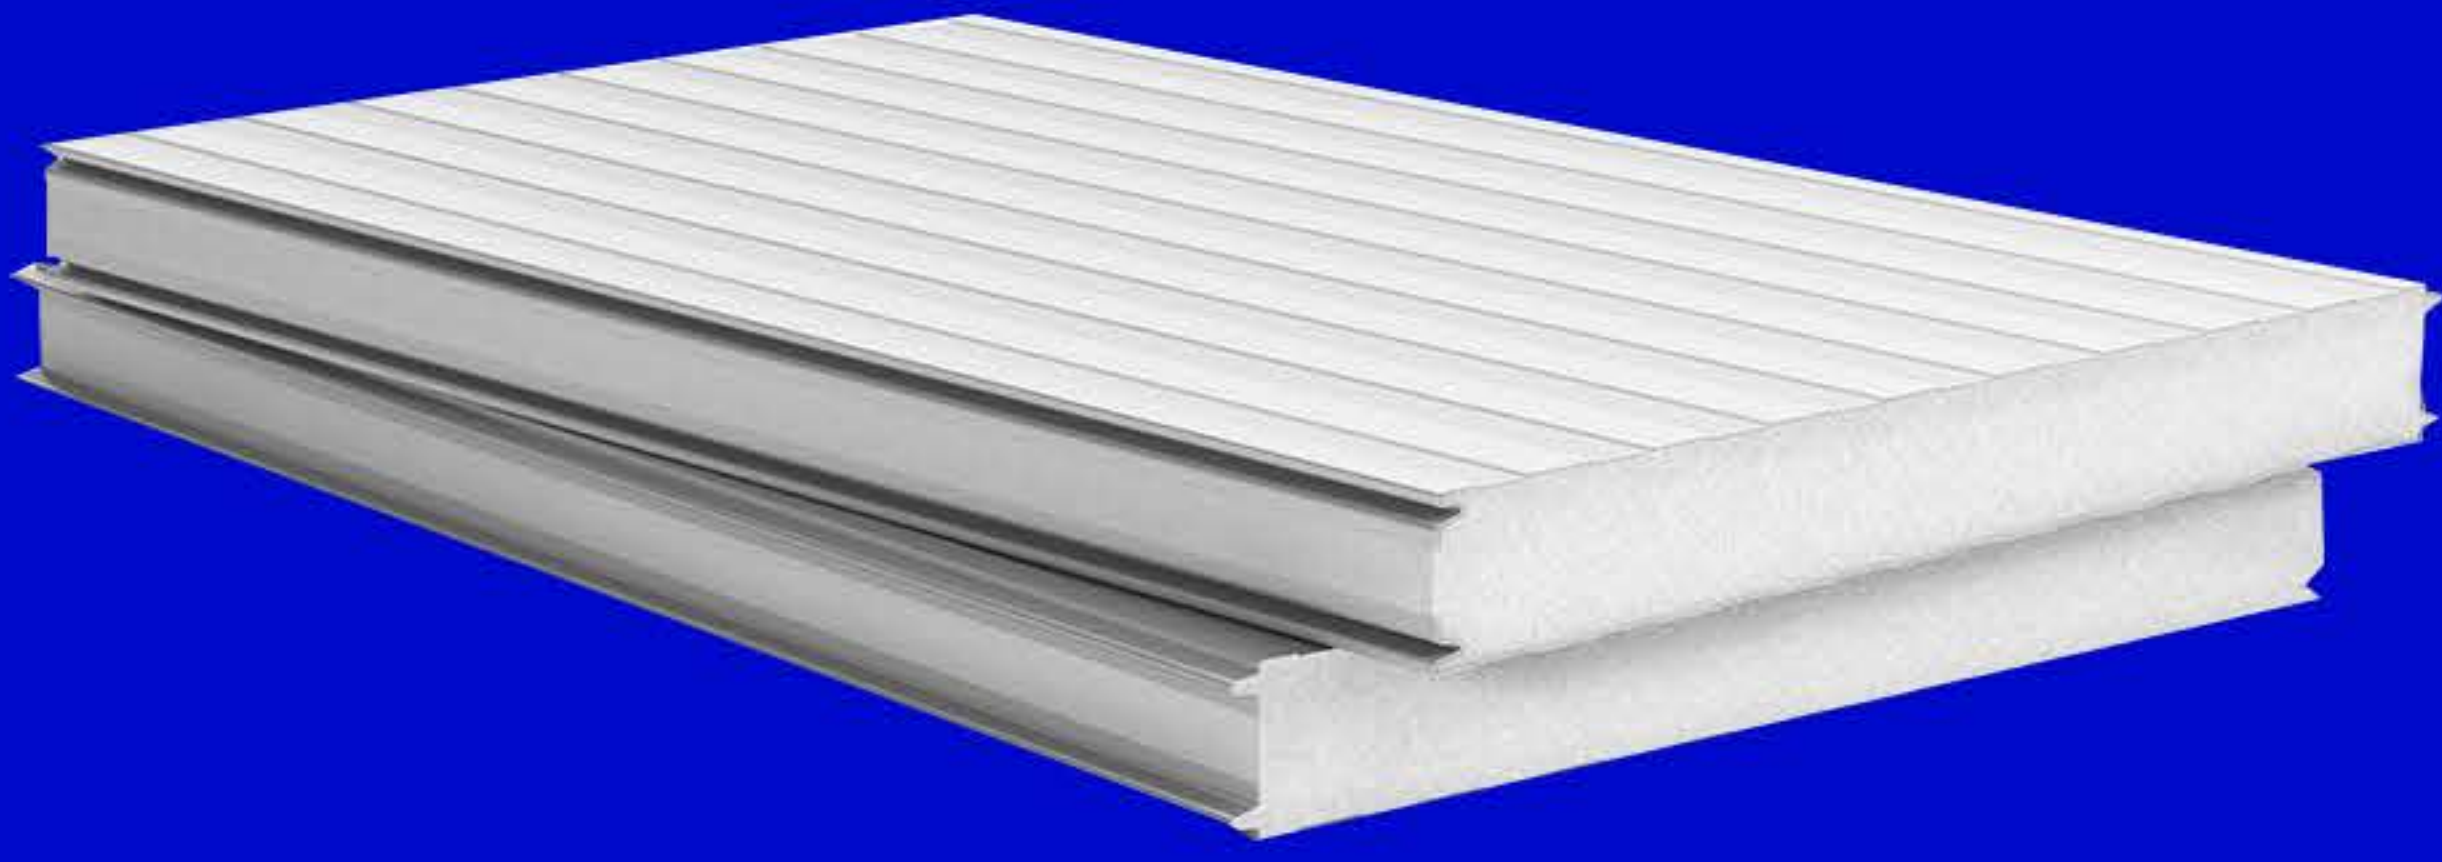

Manufacturing and fabrication of lightweight and superstrength structural parts, components, panels, and profiles for interior and exterior projects—residential and commercial construction.

Fabrication and manufacturing of lightweight insulation and structural floor, wall, and ceiling panels; custom cut profiling, interior decorating panels, and furniture. We select materials and components depending on project specifications.

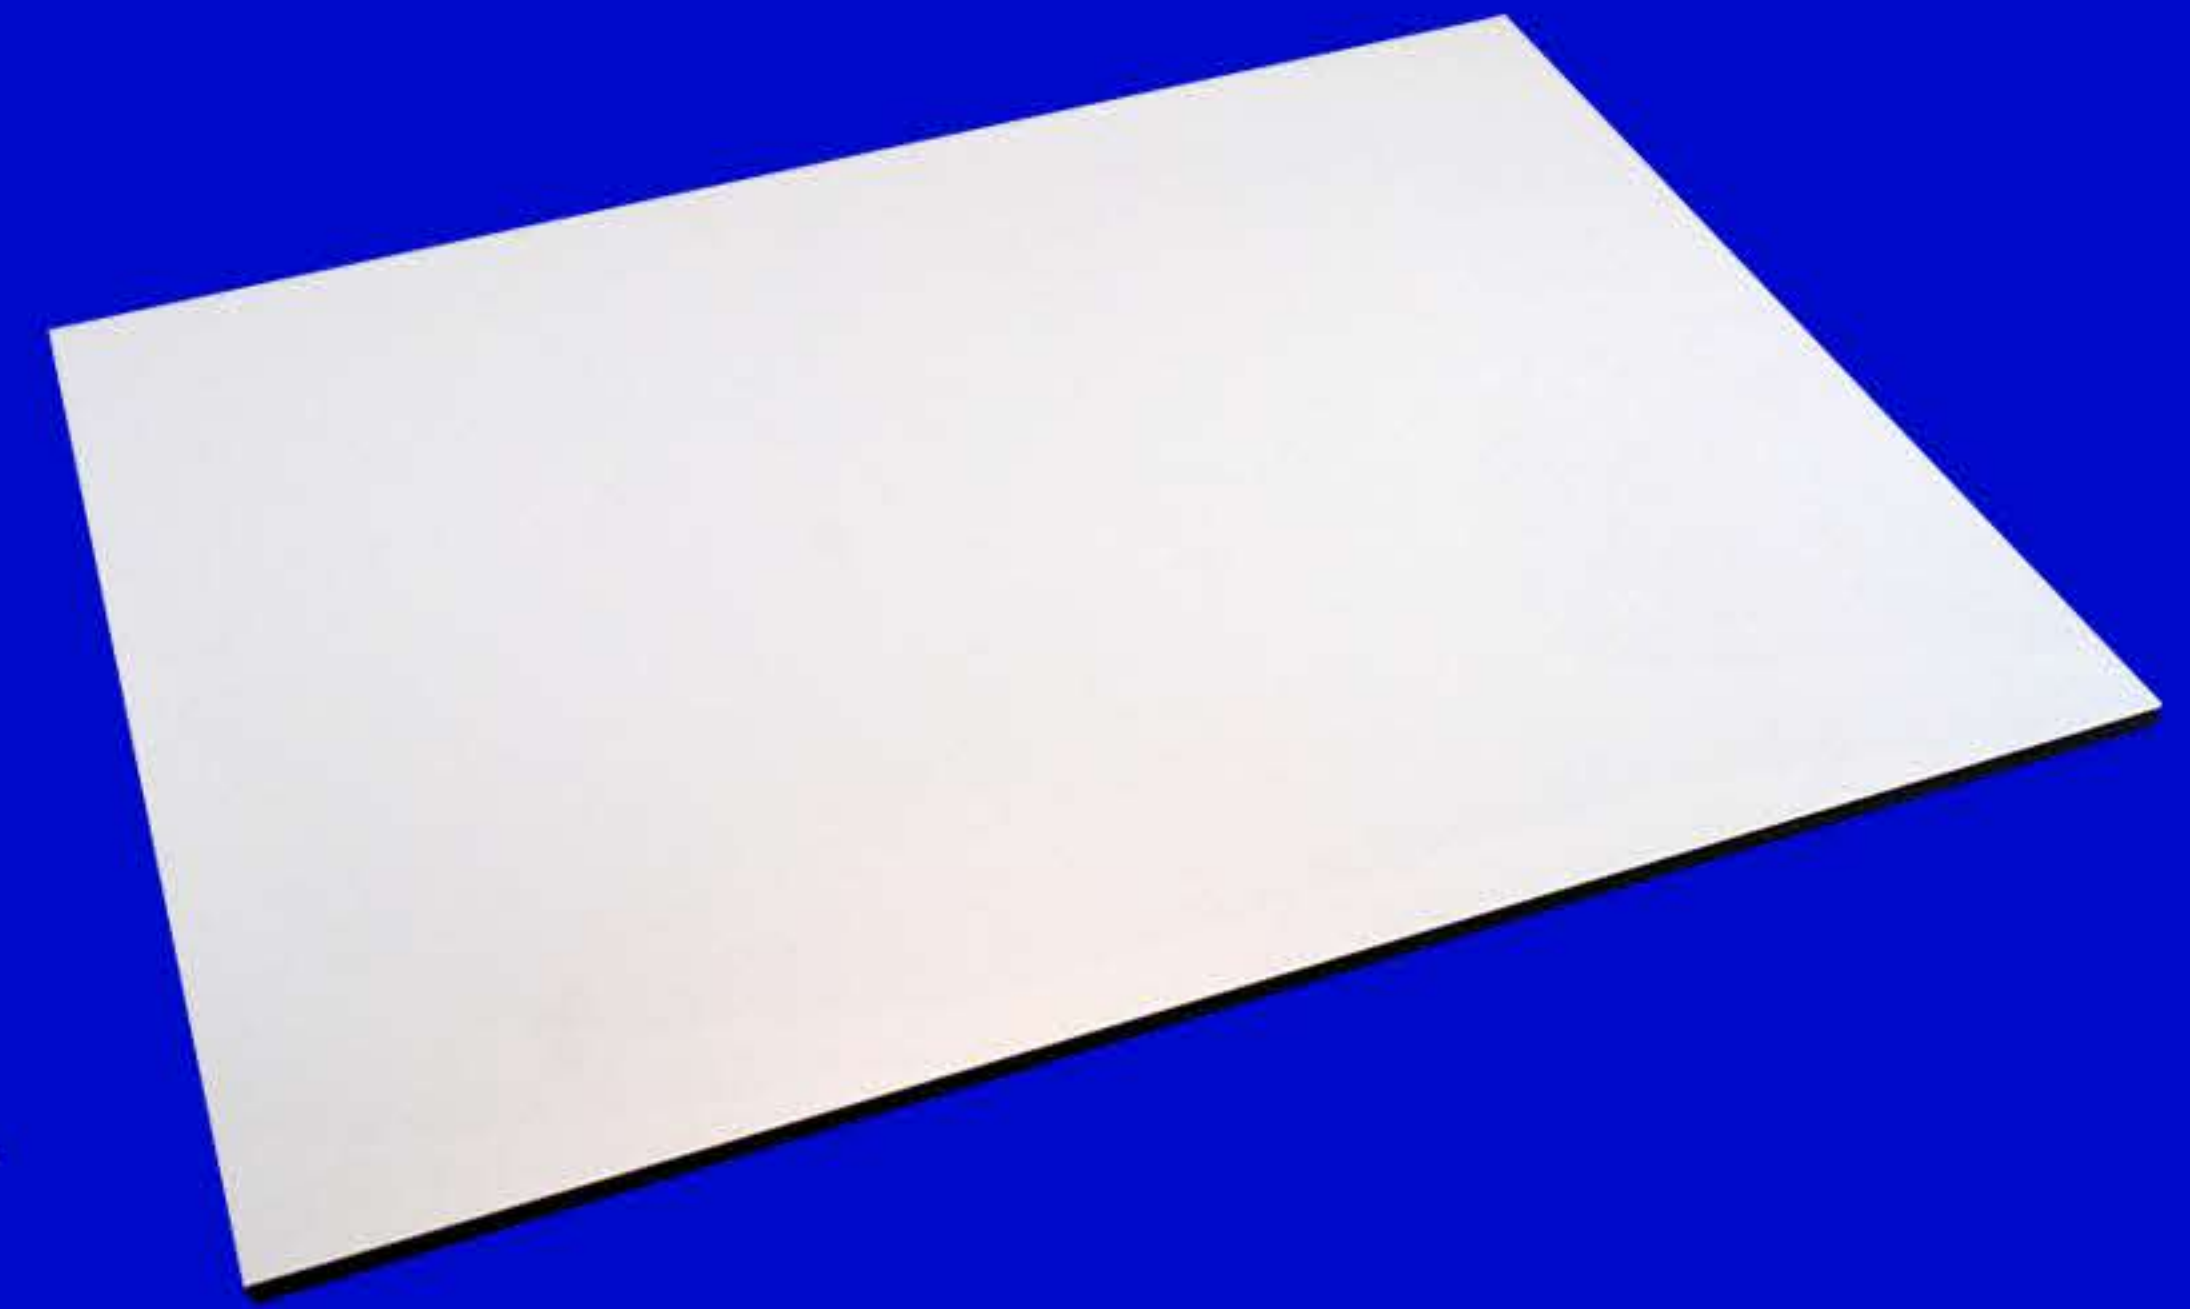

Design, fabrication and manufacturing of cruise, yacht, vessel interiors, decking, furniture, and shared spaces. We do complete custom fabrication based on design and specifications.

Fabrication and profiling of HPL Phenolic sheets and panels, recycled PET, PVC, and extruded XPS rigid sheets and boards. We use the best quality core and supporting materials for interior and exterior projects.

Custom design and fabrication of high-pressure compact laminated phenolic panels and sheets for floor, wall, tabletop, and interior decoration. Our customers rely on us because of our extensive expertise, experience, and ability to deliver the highest quality parts and components for exterior and interior projects.

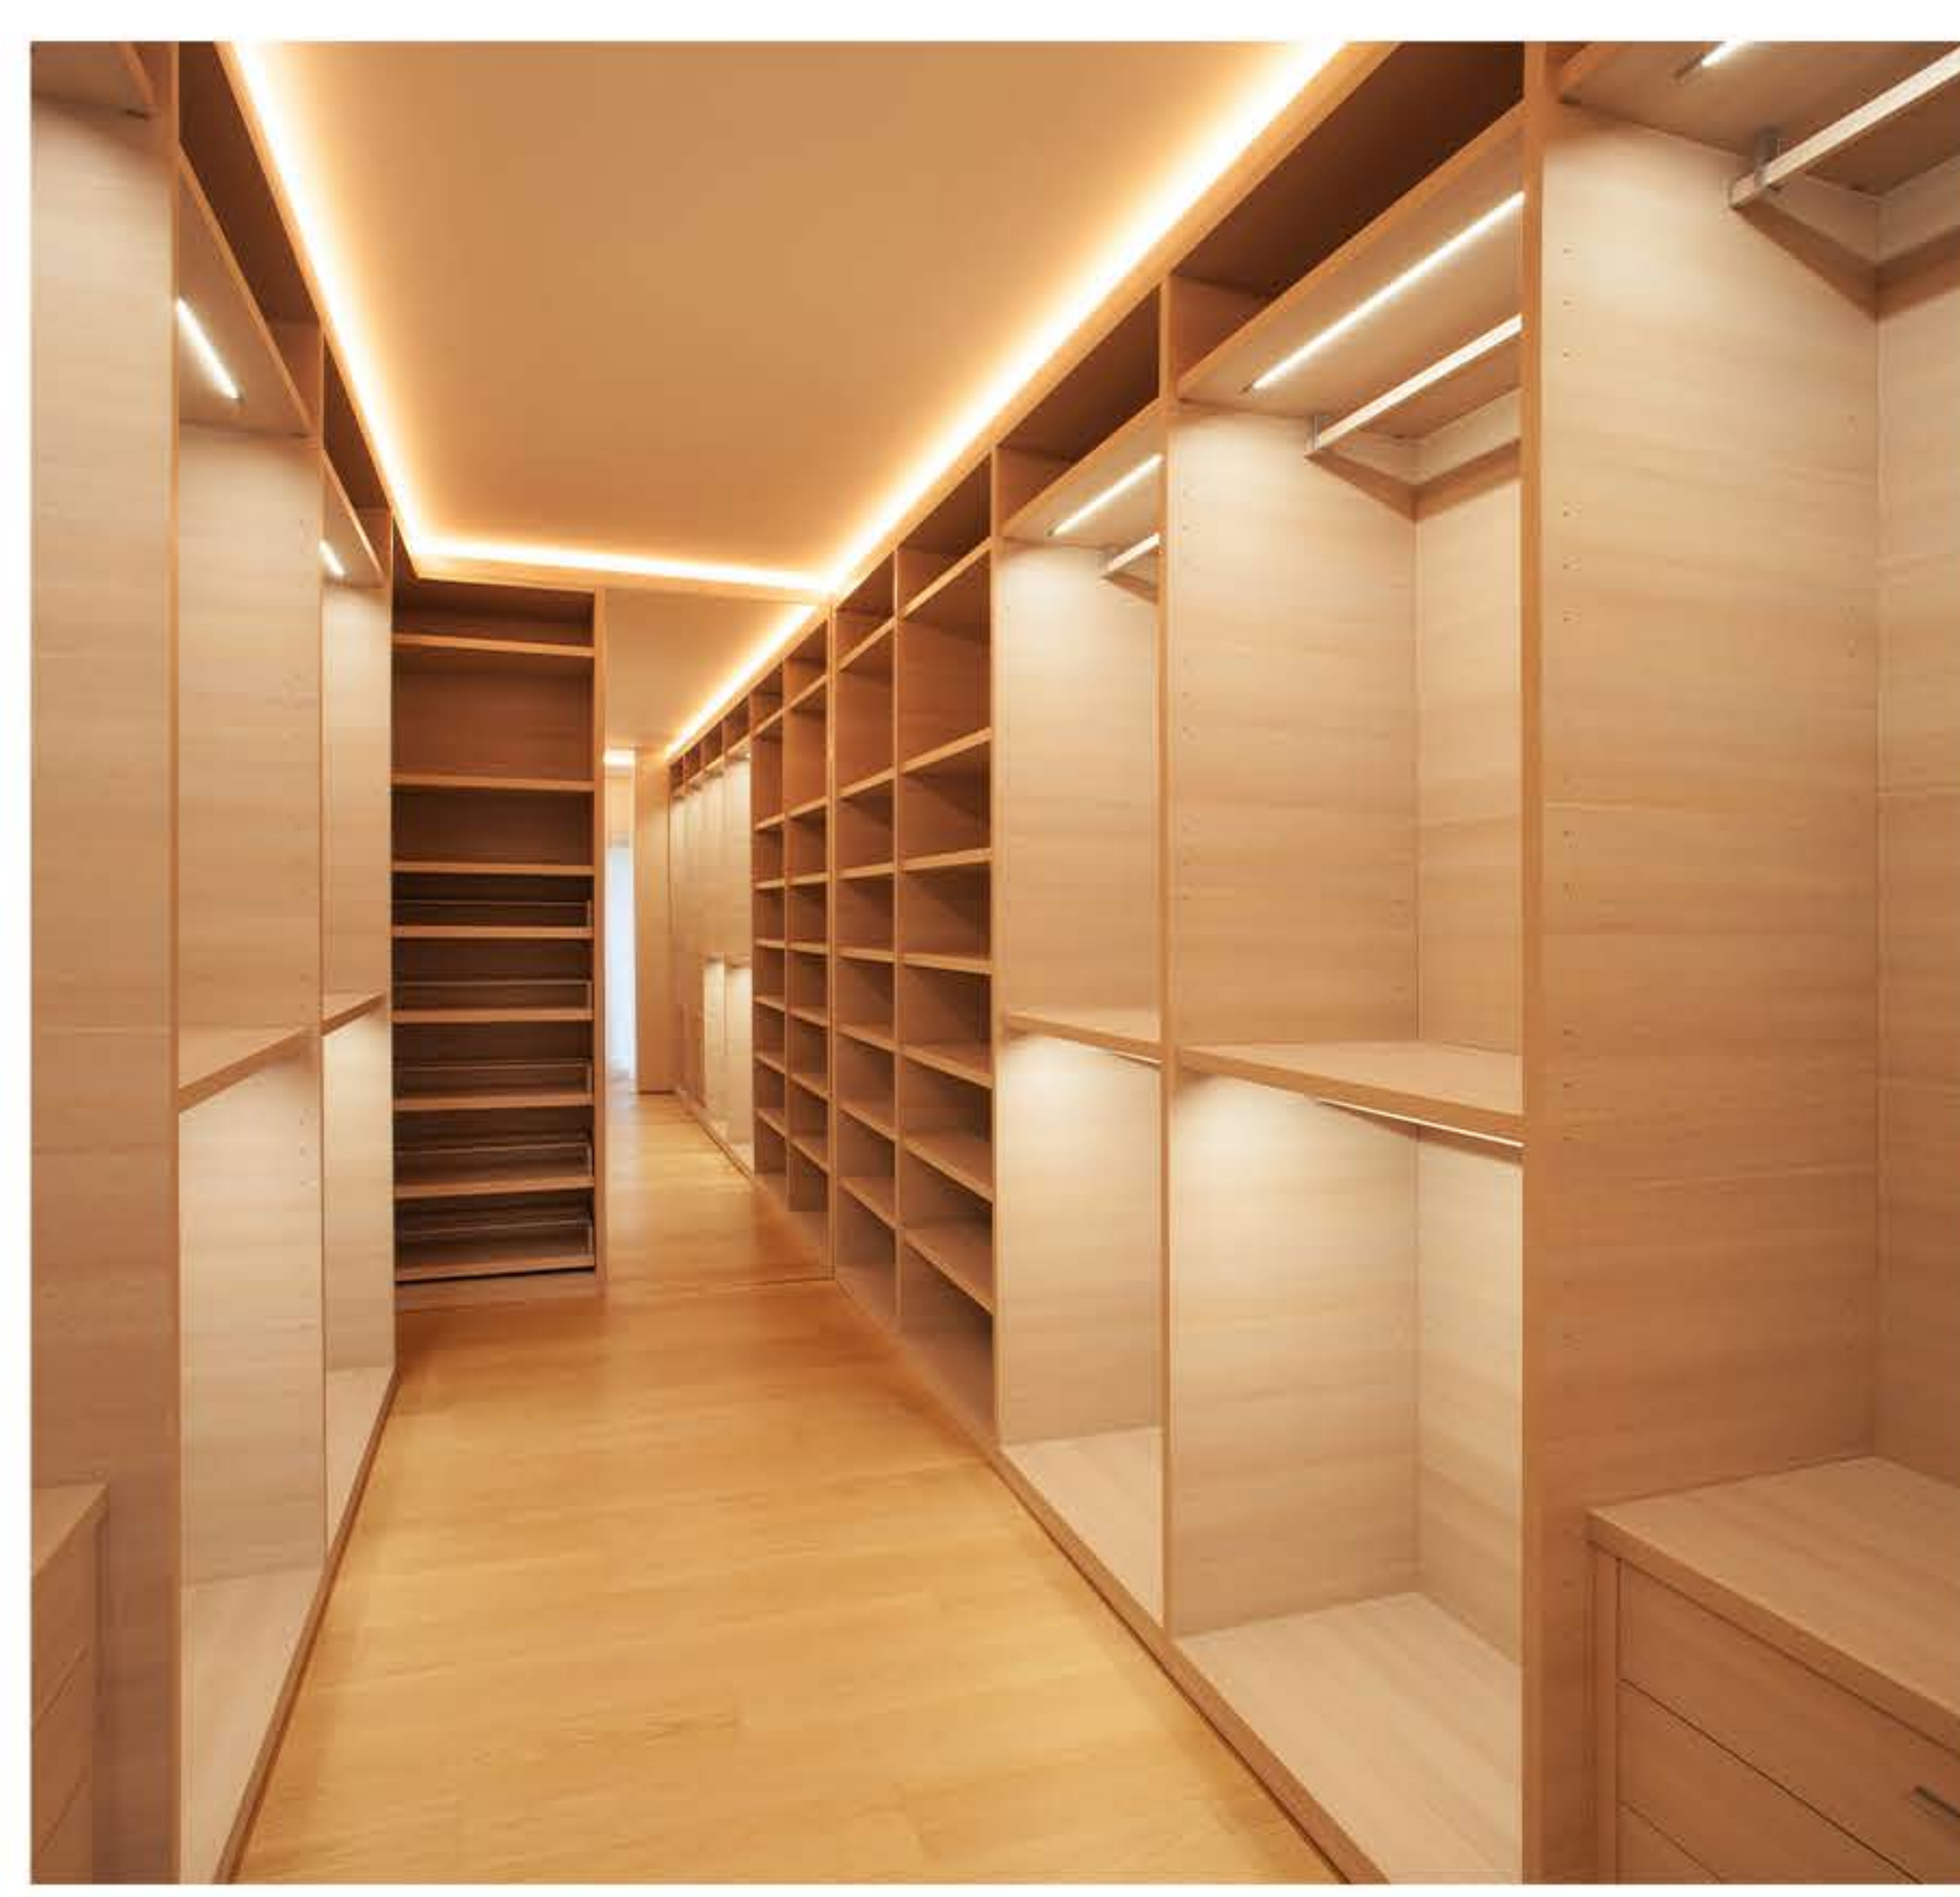

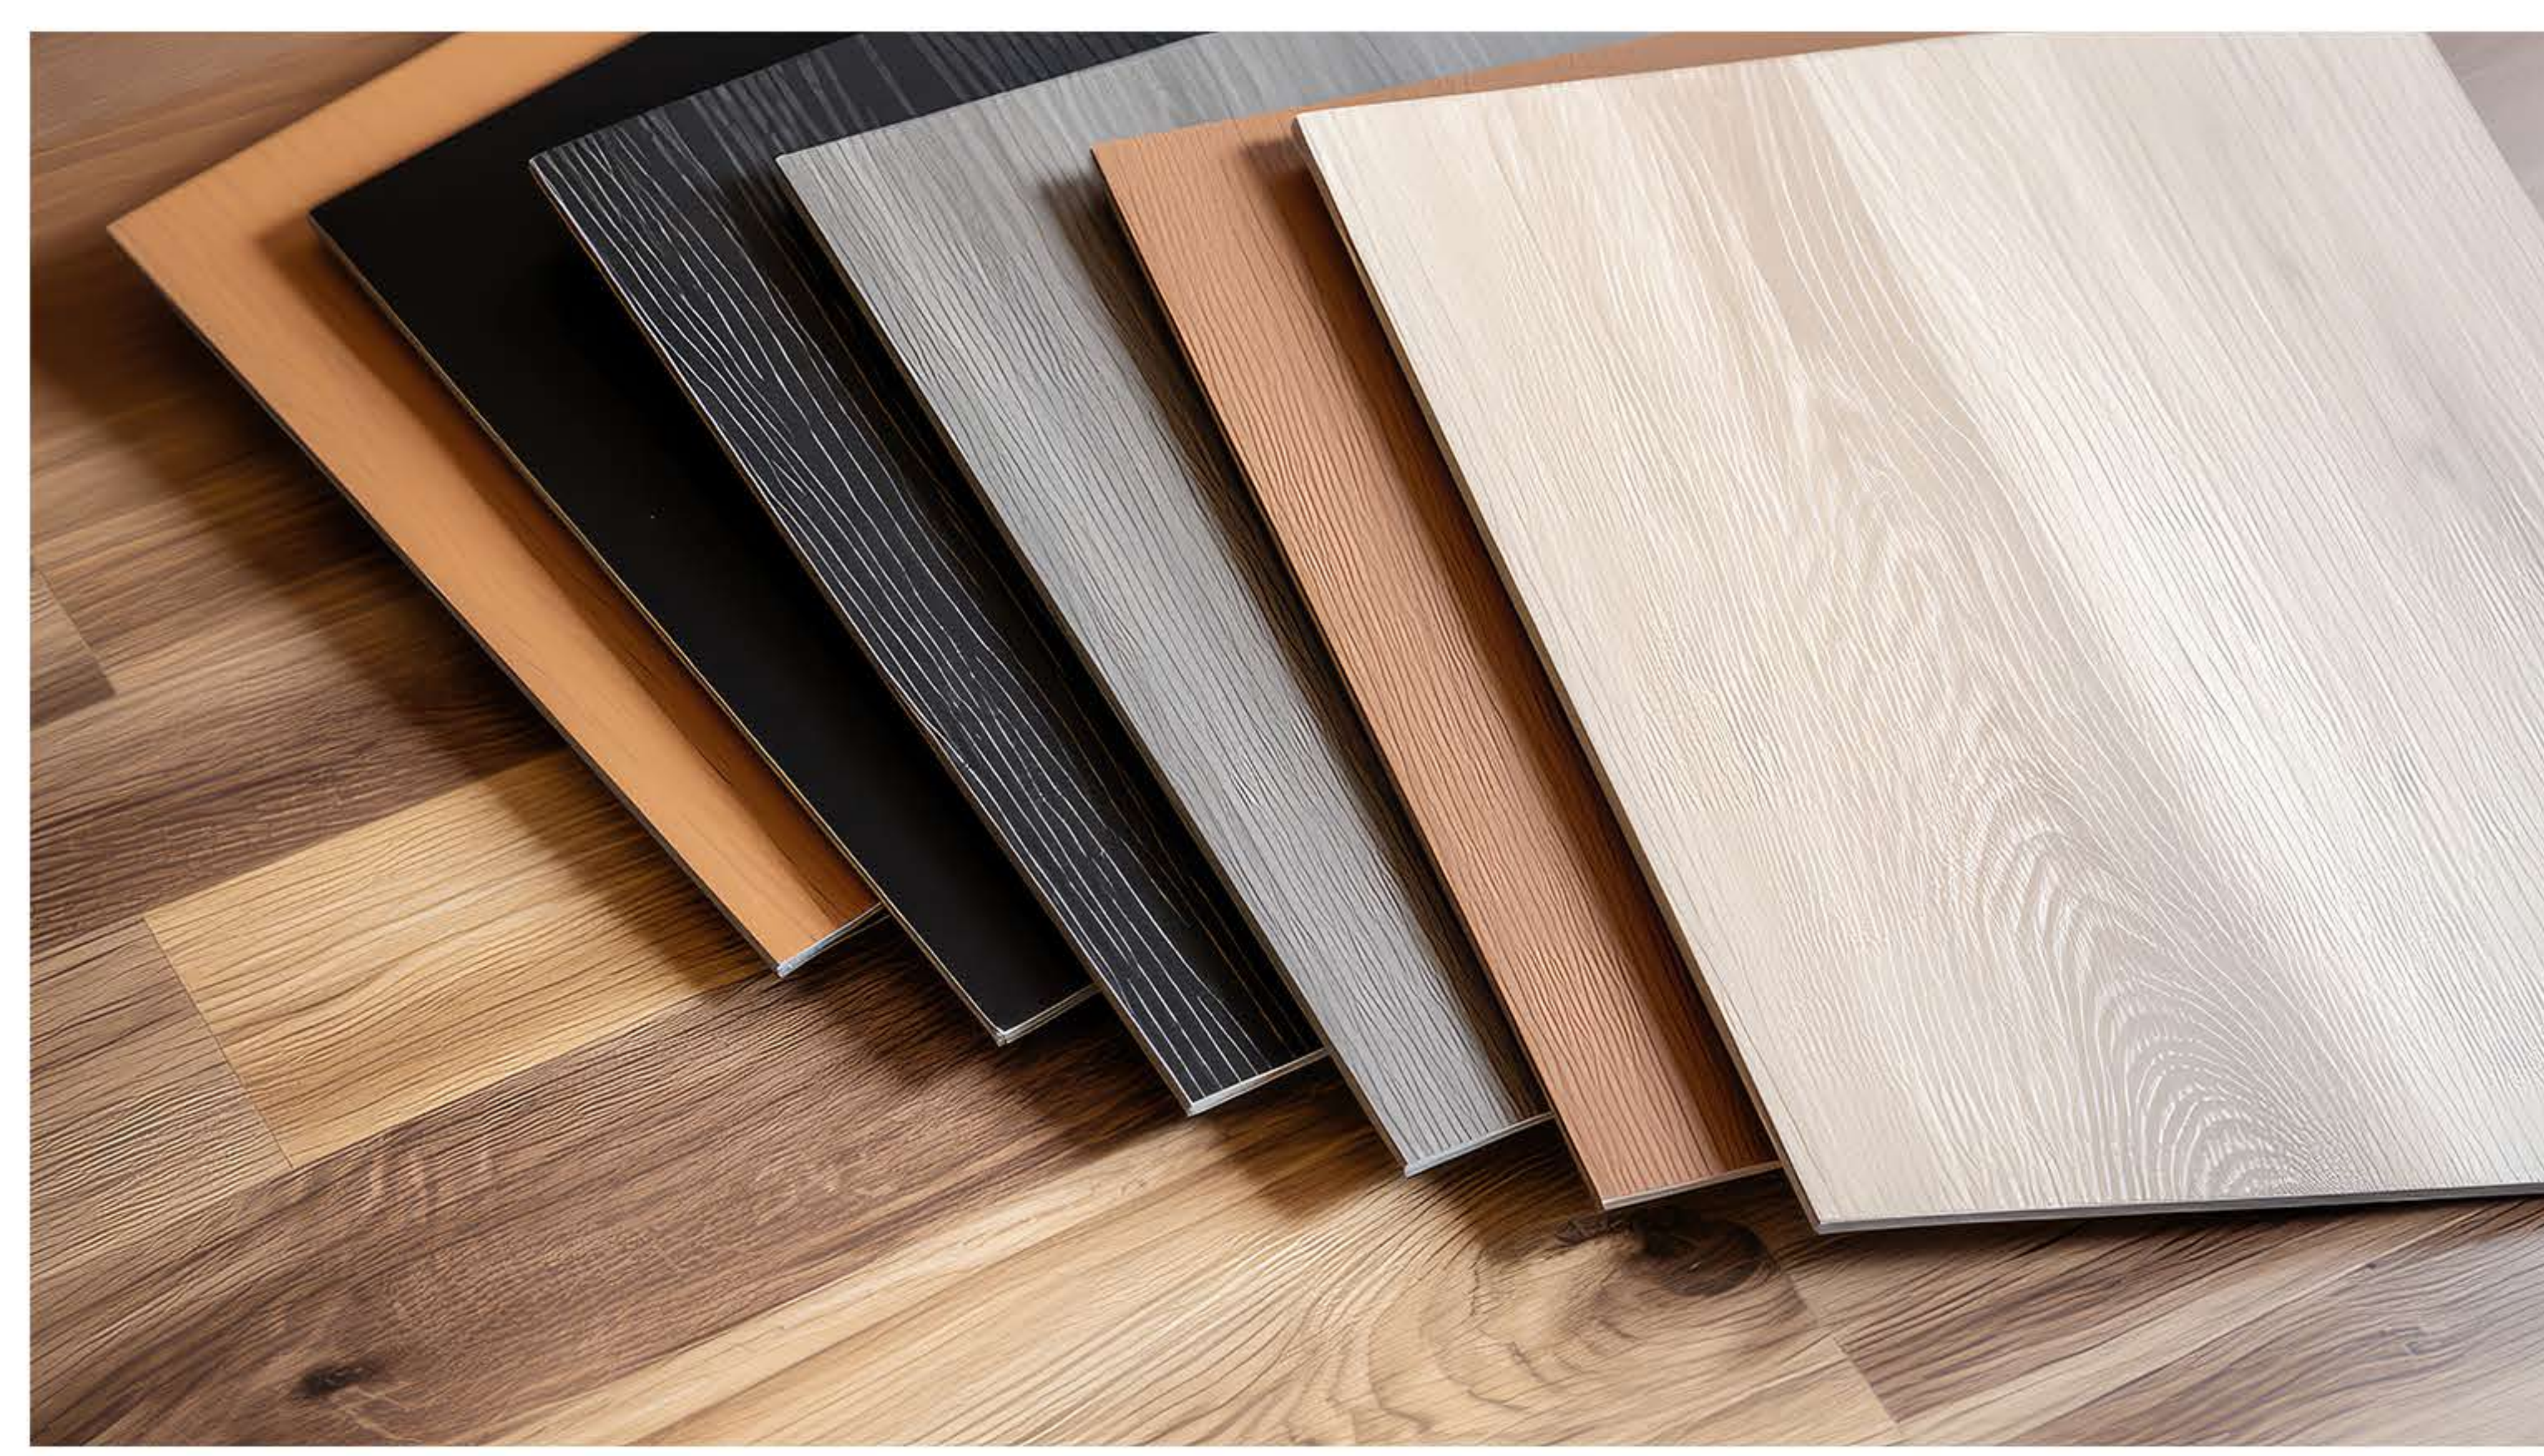

Undertaking custom-specific design and development projects in residential and commercial construction and installation. Rail, train, rolling stocks interior and insulation, cold storage and warehouse insulation, roofing, and wall panels.

At APM, we take on various infrastructure development projects as well. Our workshop offers complete custom design, fabrication, and development. You can rely on our expertise as an expert in the materials industry. At APM, we take pride in our promise to deliver your business a complete turnkey solution.

We undertake lightweight furniture manufacturing projects. We can custom design and develop lightweight structural components for furniture manufacturing projects. Our inventory has a larger selection of performance materials to select the best quality materials for your project.

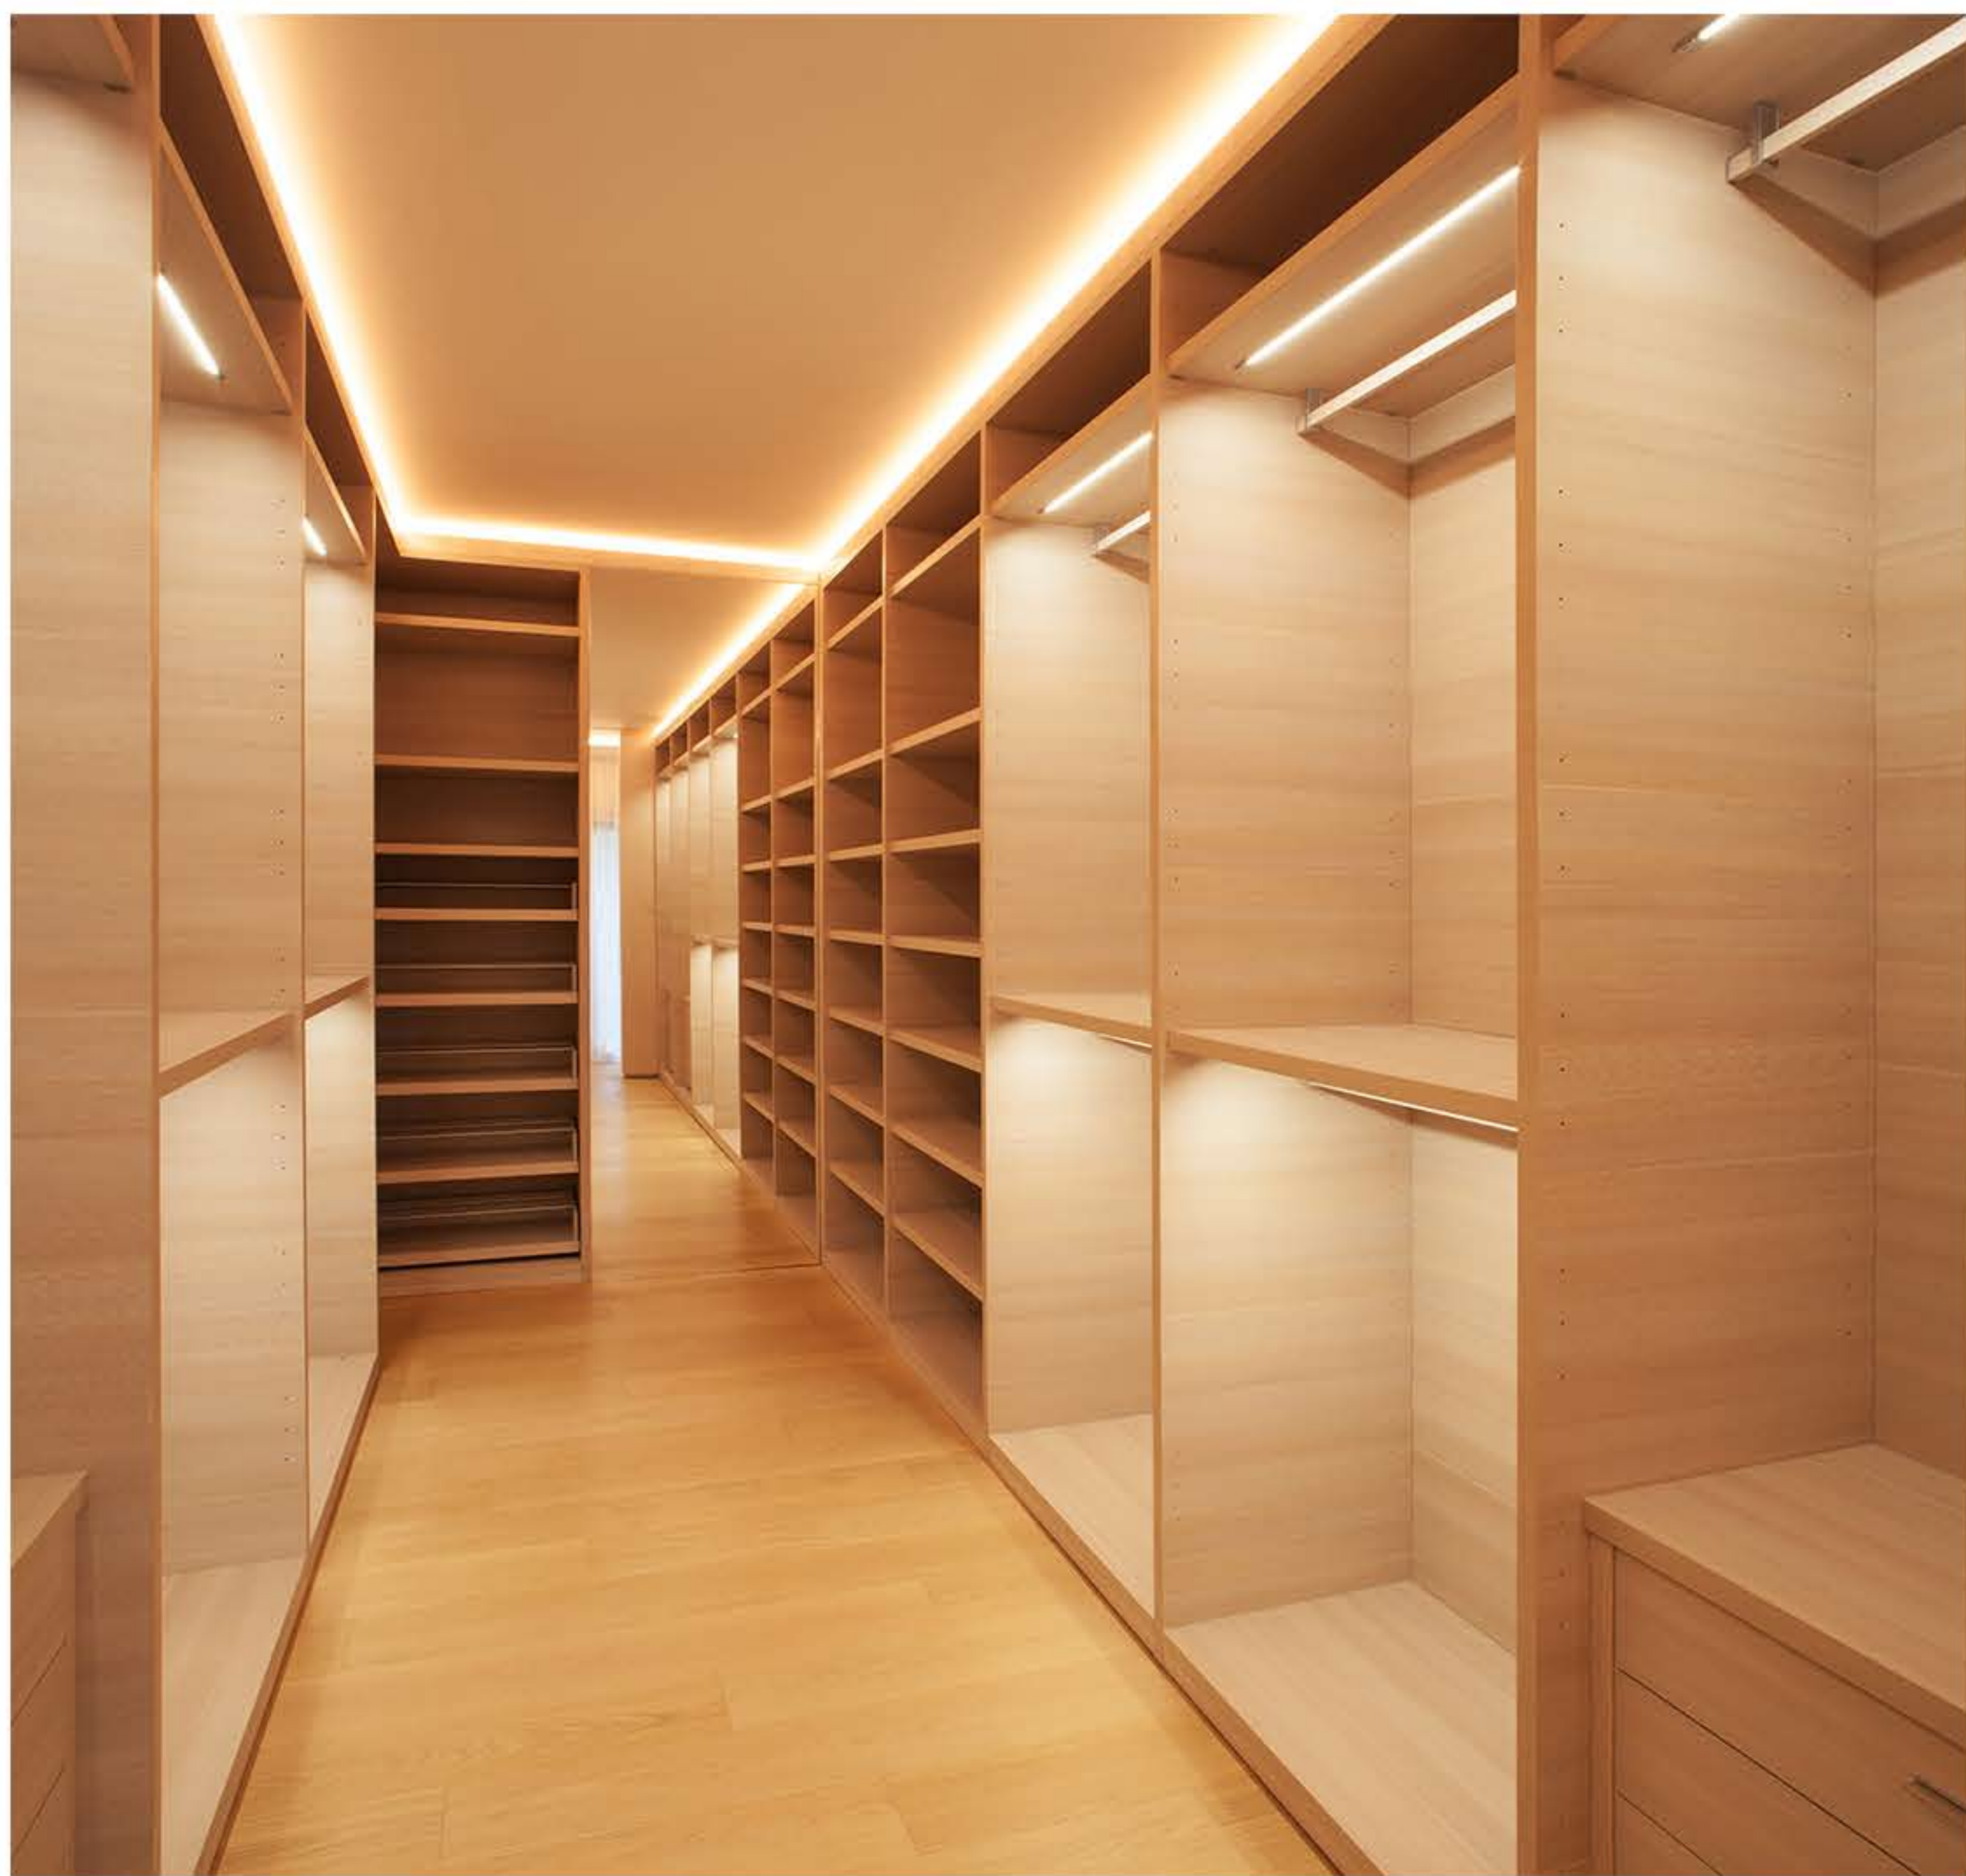

Inventory Materials

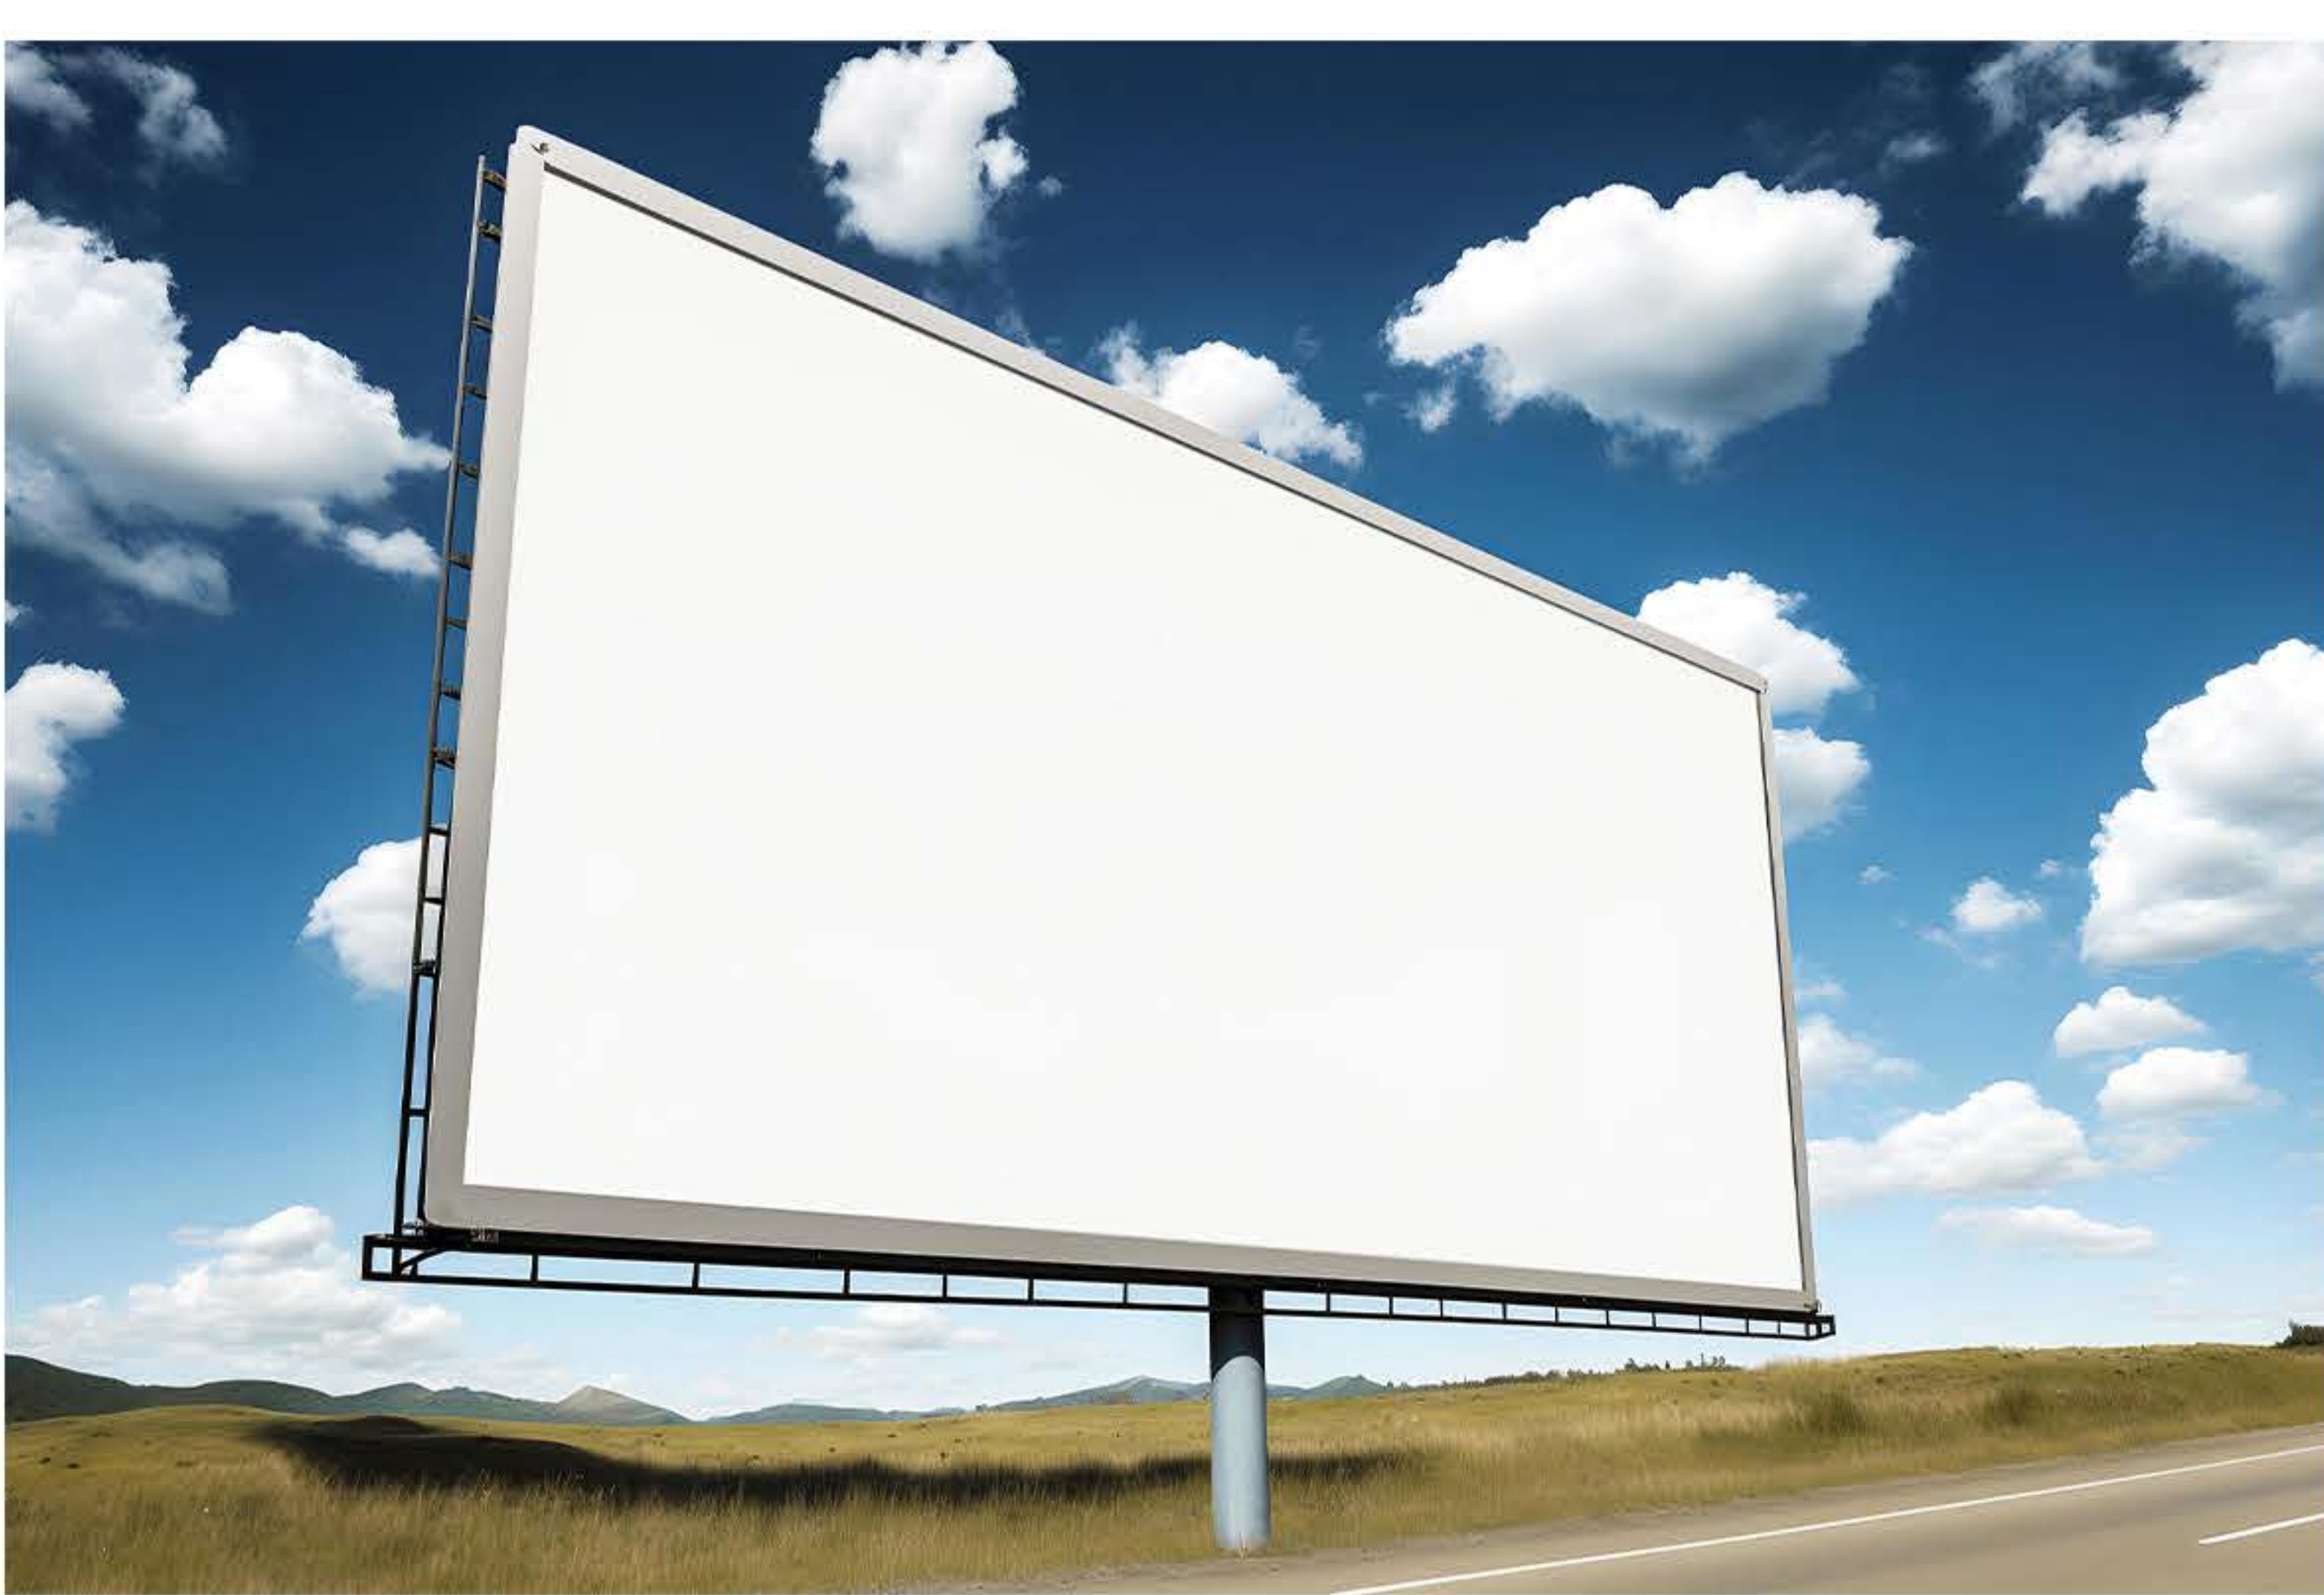

- Closed-cell rigid PU/PIR foam sheets and boards of various densities.
- Closed-cell rigid PET foam sheets and boards of various densities.
- Closed-cell rigid PVC foam sheets and boards of various densities.
- Closed-cell extruded XPS foam boards
- HPL phenolic laminates, sheets, and panels.
- Anodized aluminum sheets
- Polished wood and EVA laminates.
- PET and PP laminates.
- Flame retardant laminates.
- Copper and other metallic laminates.
- Heat and moisture insulation laminates.
- Balsa wood sheets and boards.
- Project-specific materials sourcing and selection.

Construction and Interior projects

- Cruise and yacht interior construction, decoration and decking.
- Cruise, yacht, and commercial vessel interior insulation.
- Residential and commercial building interior and exterior insulation.
- Residential and commercial building interior construction and decoration.
- Residential and commercial interior furniture and decoration.
- Train, rail, and rolling stock interior insulation and decoration.
- Cold storage and warehouse insulation and interior construction and decoration.
- Floor, wall, ceiling, and interior insulation and structural panels.

- Custom design, fabrication, and product sampling.
- Materials selection, testing, and certification.
- Materials qualifying according to the local and federal standards.

- Mass production of structural parts and components.
- Custom cutting and fabrication of structural parts and components.
